The egg breaker imitates the work of human hands by cracking the eggshells with the use of special knives. The machine's high capacity is attributed to the use of a rotating knife mechanism. After being cracked open, eggs slide down a separator, where yolks are separated from egg whites. This most hygienic egg breaking method is an innovation by OVO-TECH. After completion of the job, the machine can be closed and cleaned with the use of a CIP system.
The RX-2 egg breaker breaks eggs using two rows of highly specialized knife mechanisms. Eggs are automatically fed into the machine from a belt feeder. Yolk and white separation is accomplished with the use of a single, compact size separator.
The machine is made out of stainless steel EN 1.4301 (AISI 304).
